

# Spray uneven fields as if they were flat.

Some of the most  
productive farm fields  
have uneven terrain.

**I**T'S DIFFICULT TO MAKE GOOD TIME spraying when you have to slow down for uneven terrain in your field. Increase your ground speed and you'll pay the price of either chemical drift due to improper boom height or repairing boom damage.

At Demco, we offer a weightless boom gliding suspension system. It senses uneven landscape and signals the boom's hydraulic control system to automatically raise or lower the boom section. This allows the boom to better follow the contour of the field, thereby enabling more consistent ground speed.

The construction of a Demco Glide Suspension Boom is as impressive as its performance. Quality components and heavy duty materials are joined together with superior design and manufacturing techniques. You'll get efficient performance for many spraying seasons to come.

**Spraying requires undivided attention to details.  
Now you don't have to worry about boom control.**
